1. GENERAL DESCRIPTION

NCT7718W is a temperature sensor with one local and one remote sensor; the remote temperature sensor input could be connected to thermal diode or transistor, such as 2N3904. A 10-bit ADC (Analog-to-Digital Converter) is built inside NCT7718W to convert the monitored temperature value with 0.125°C resolution.

Additionally, the NCT7718W supports 2-wire System Management Bus (SMBus™) series interface, and it also provides the hardware thermal alert or system shutdown via ALERT# and T_CRIT# pin.

The NCT7718W is a high precision, low-power consumption IC supporting SMBus™ interface, which is specifically designed for the PC, Notebook applications, and any embedded environments. Its available package is 8-pin MSOP, with the working voltage of 3.3V.

2. FEATURES

2.1 Temperature Measurement

Measure the temperature with high accuracy

One local on-die thermal sensor

One remote temperature sensor with current mode

2.2 Over Temperature

Supports 2 alert outputs : ALERT# and T_CRIT#

T_CRIT# point supports Hardware Power-on setting

ALERT# output supports SMBus™ 2.0 ARA function

2.3 General

I²C® Compatible System Management bus (SMBus™)

3.3V±5% V_{DD} operation

8-pin MSOP Green Package (Halogen-free)

6. FUNCTION DESCRIPTION

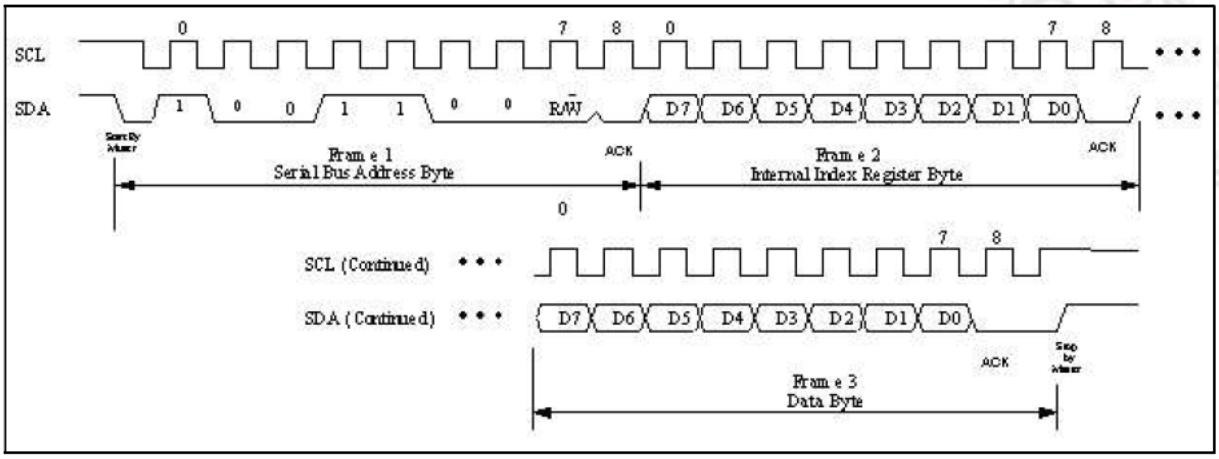

6.1 General Description

NCT7718W is SMBus™ interface device to provide on-die temperature sensor and 1 set of thermal inputs for CPU/GPU thermal diode sensor, 2 wire alert signals which ALERT# is for processor event notification and T_CRIT# is for thermal shutdown.

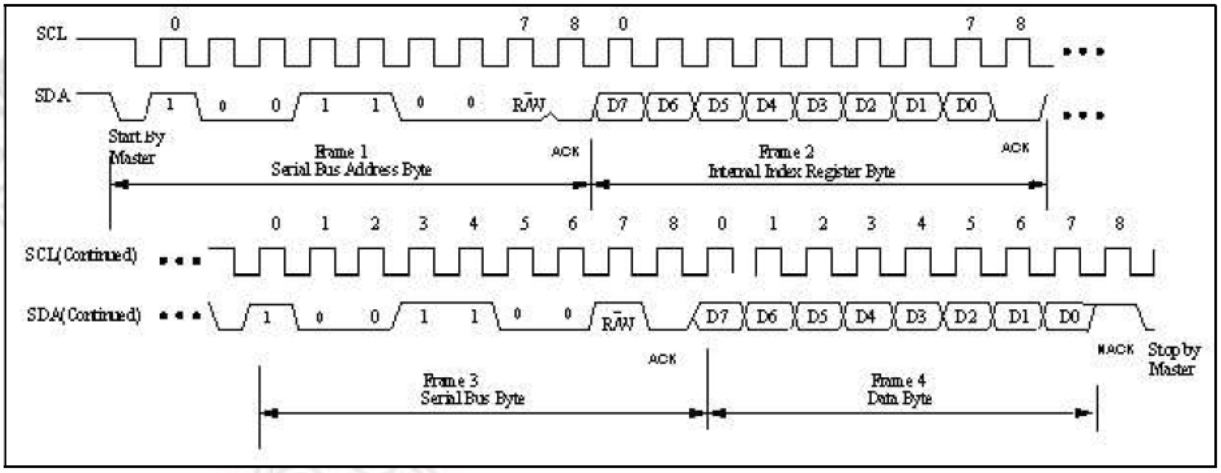

6.2 Access Interface

NCT7718W provides SMBus™ to access the internal register, and supports SMBus™ byte write and byte read protocols.

6.2.1 Data write to the internal register

6.2.2 Data read from the internal register

6.3 Address Setting

NCT7718W I²C/ SMBus™ address is 1001100xb (x is R/W bit).

6.4 Temperature Measurement Data Format

6.4.1 The local temperature (on-die) data with 8-bit 2`s complement format.

TEMPERATURE	8-BIT DIGITAL OUTPUT
+127°C	0111,1111
+25°C	0001,1001
+2°C	0000,0010
+1°C	0000,0001
+0°C	0000,0000
- 1°C	1111,1111
- 2°C	1111,1110
- 25°C	1110,0111
- 128°C	1000,0000

6.4.2 The remote temperature data with 11-bit 2`s complement format.

TEMPERATURE	8-BIT DIGITAL OUTPUT HIGH BYTE	3-BIT DIGITAL OUTPUT LOW BYTE

6.5 ALERT# Output

The NCT7718W ALERT# pin is an active-low open-drain output pin which is triggered when measured temperature exceeds the limitation defined in the limit registers. There are three types of ALERT# output mode: the ALERT# output comparator mode, the ALERT# output interrupt mode, and the ALERT# output SMBus™ ALERT# mode.

6.5.1 ALERT# Output Comparator Mode

Figure 1 shows the mechanism of the ALERT# output comparator mode. In this mode, the ALERT# pin will be alerted if the monitored temperature is out-of-limit and the ALERT# pin keeps low until the temperature goes back to the target range.

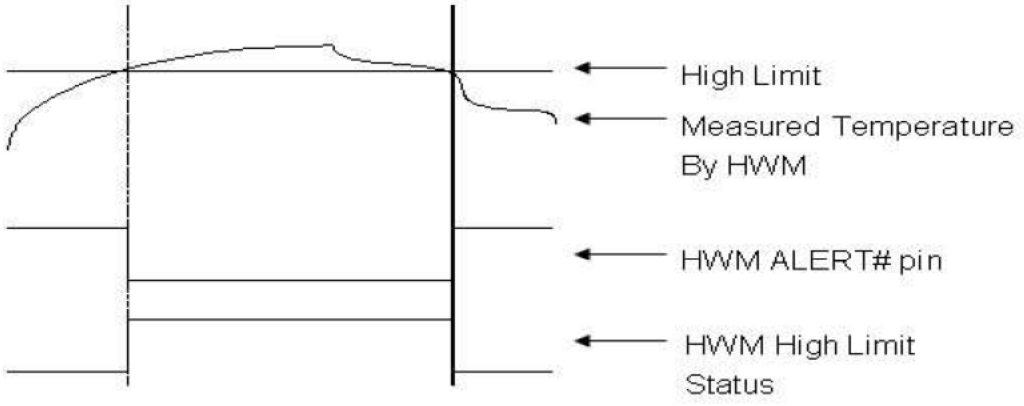

Figure 1

6.5.2 ALERT# Output Interrupt Mode

Figure 2 shows the mechanism of the ALERT# output interrupt mode. In this mode, the NCT7718W will set the ALERT mask bit of Configuration Register during a read of the Status Register if any flag in Status Register, except the ADC_Busy flag and Remote Diode Open flag, is set. This prevents further ALERT# triggering until the master has reset the ALERT mask bit (write 0 to Alert_MSK), at the end of the interrupt service routine. The Status Register flags are cleared only upon a read Status Register command from the master and will be re-alerted at the end of the next temperature conversion if the measured temperature still falls outside of the allowed range.

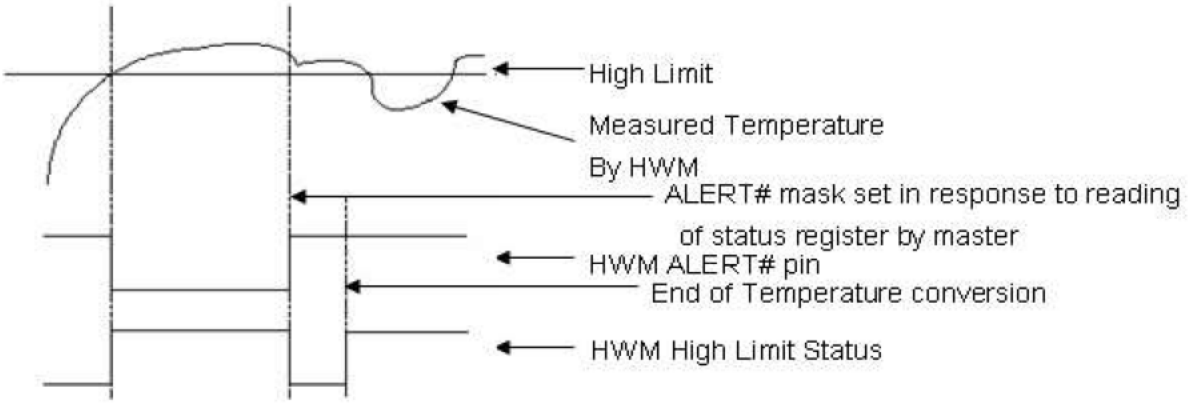

Figure 2

6.5.3 ALERT# Output SMBus alert Mode

Figure 3 shows the mechanism of the ALERT# output SMBus™ alert mode. In this mode, the ALERT# output of the NCT7718W is connected to the SMBus™ alert line which has more than one device connected to it. Through such and implementation, SMBus™ alert mode can assist the master in resolving which salve generates an interrupt. When the measured temperature falls outside of the allowed range, the ALERT# pin will be pulled low and the corresponding alert flags in Status Register will be set to 1. The ALERT mask bit will just be set if there is a read command for Status Register or when SMBus™ ALERT Response Address (ARA) occurs from master (Alert Response Address is 0001100x). Meanwhile, the NCT7718W will generate and return its own address to the master. If the temperature never falls outside of the allowed range, the latched ALERT# pin can release by the reset ALERT mask bit and the latched corresponding alert flags in Status Register can release by reading command for Status Register.

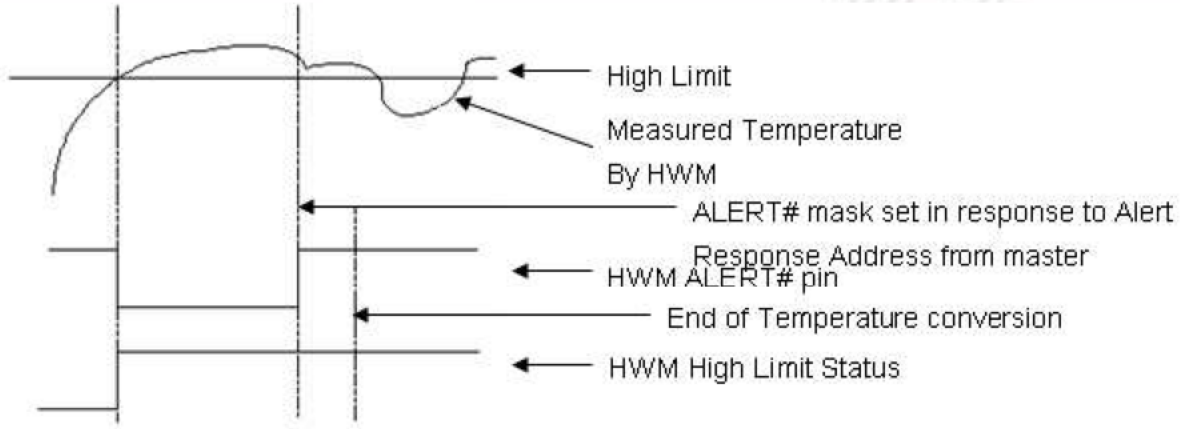

Figure 3

6.5.4 T_CRIT# Output

T_CRIT# output pulls low when the measured temperature exceeds the critical temperature setting. Once the T_CRIT# output pulls low, it will not be set high until the measured temperature is lower than "T_CRIT – TH", where TH is Temperature Hysteresis. Status Register will not be reset until it is read and the temperature conversion falls below the T_CRIT set point, the ALERT-MSK bit of Configuration Register will be set after Status Register read. Figure 4 shows this mechanism.

7-0	**Device ID** Device ID of NCT7718W is 9xh (x=0,1,2…..)

新唐科技 NUVOTON INTELLECTUAL PROPERTY

8. ELECTRICAL CHARACTERISTICS

8.1 Absolute Maximum Ratings

PARAMETER		RATING	UNIT
Power Supply Voltage		3.3V ± 5%	V
Input Voltage		-0.3 to +3.6	V
Operating Temperature		-40 to +125	° C
Storage Temperature		-55 to +150	° C
ESD Protection	Human Body Mode	2	KV
	Machine Mode	200	V
	Latch-up	100	mA

Note: Exposure to conditions beyond those listed under Absolute Maximum Ratings may adversely affect the life and reliability of the device.

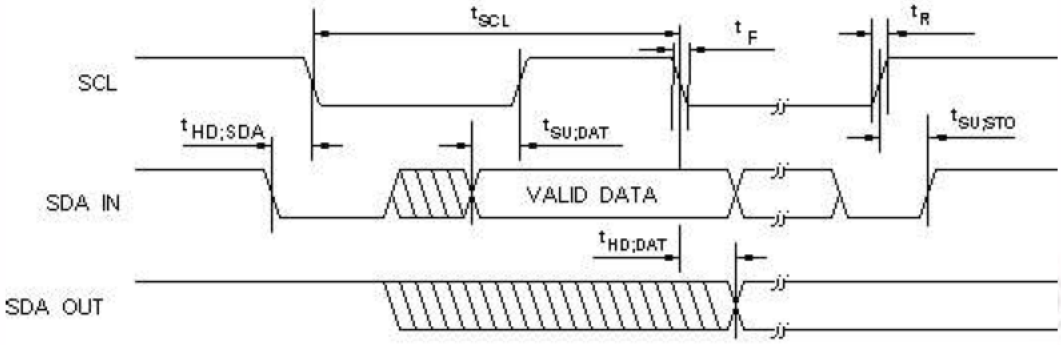

8.2 DC Characteristics

(Ta = 0° C to 70° C, VDD = 3.3V ± 5%, GND = 0V)

PARAMETER	SYM.	MIN.	TYP.	MAX.	UNIT	CONDITIONS
OD_{12} – Open-drain output pin with source-sink capability of 12 mA						
Output Low Voltage	V_{OL}			0.4	V	I_{OL} = 12 mA
OUT_{12} - Output buffer pin with source-sink capability of 12 mA						
Output Low Voltage	V_{OL}			0.4	V	I_{OL} = 12 mA
Output High Voltage	V_{OH}	2.4			V	I_{OH} = -12 mA
IN_{ts} - TTL level Schmitt-triggered input pin						
Input Low Voltage	V_{IL}			0.8	V	VDD = 3.3V
Input High Voltage	V_{IH}	2.0			V	VDD = 3.3V
Input High Leakage	I_{LIH}			+10	µA	VIN=3.3V
Input Low Leakage	I_{LIL}			-10	µA	VIN=0V

8.3 AC Characteristics

SMBus™ Interface

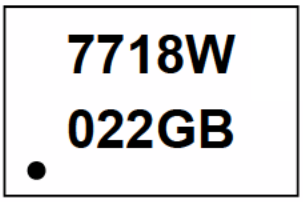

Serial Bus Timing Diagram

PARAMETER	SYMBOL	MIN.	MAX.	UNIT
SCL clock period	t_{SCL}	2.5		uS
Start condition hold time	$t_{HD;SDA}$	1.5		uS
Stop condition setup-up time	$t_{SU;STO}$	1		uS
DATA to SCL setup time	$t_{SU;DAT}$	120		nS
DATA to SCL hold time	$t_{HD;DAT}$	5		nS
SCL and SDA rise time	t_R		1.0	uS
SCL and SDA fall time	t_F		300	nS

9. ORDERING INFORMATION

PART NO.	PACKAGE	SHIPPING SHAPE	MOQ	PRODUCTION FLOW
NCT7718W	MSOP, 8pin Green package	Tape & Reel	4,000 units	Commercial, 0℃ to +70℃

10. TOP MARKING SPECIFICATION

1st line: Part number: **7718W** means NCT7718W

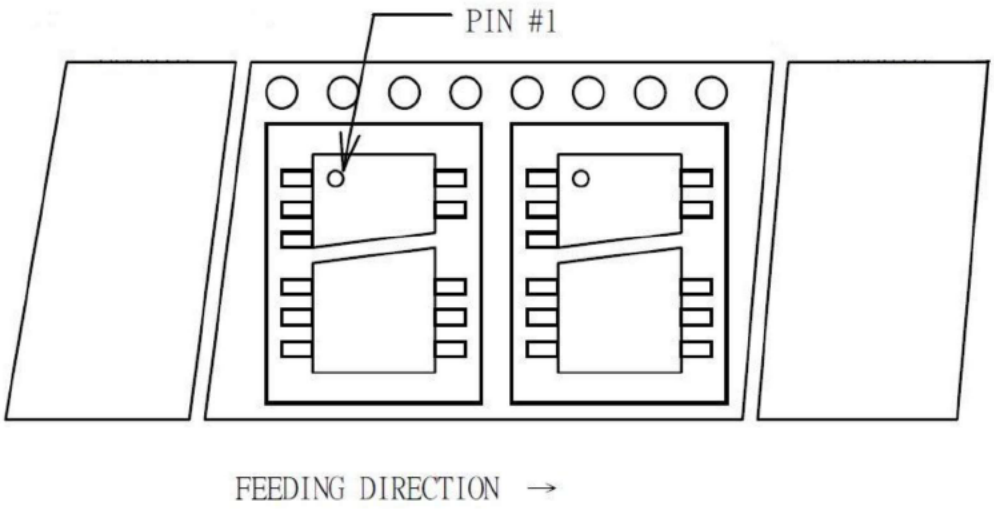

2nd line: Assembly tracking code

0 22 : packages made in year 2010, week 22

G: Assembly house code

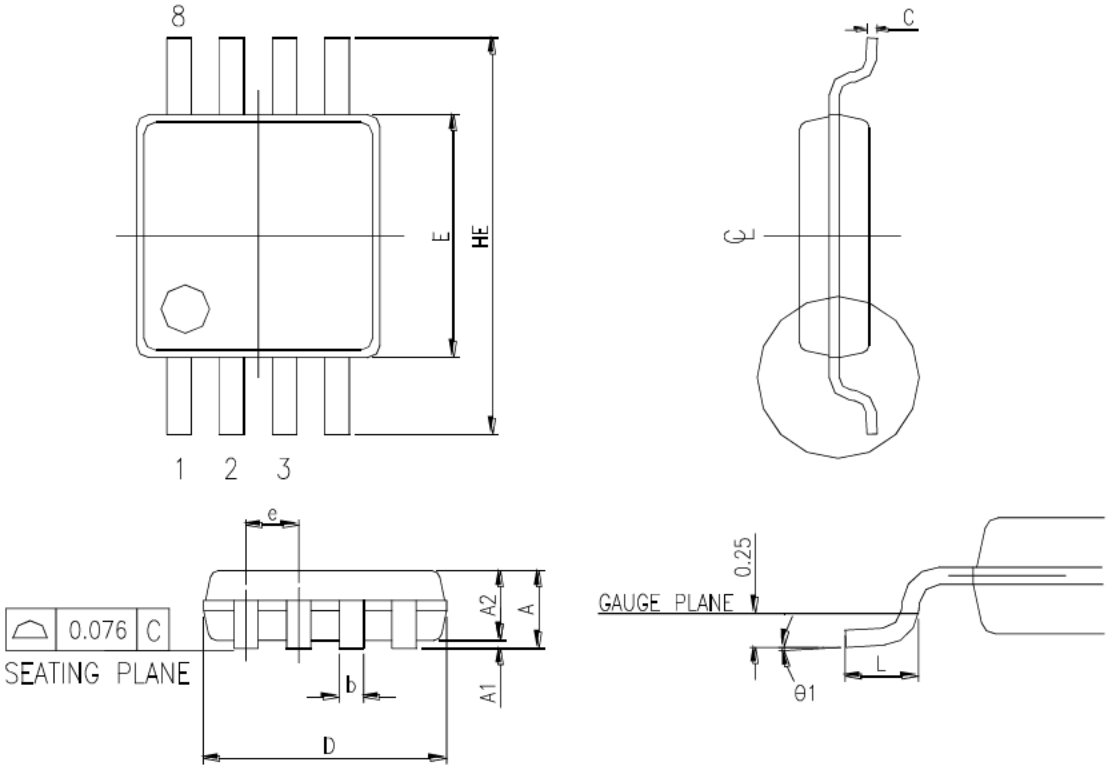

B: Product version

Important Notice

Nuvoton Products are neither intended nor warranted for usage in systems or equipment, any malfunction or failure of which may cause loss of human life, bodily injury or severe property damage. Such applications are deemed, "Insecure Usage".

Insecure usage includes, but is not limited to: equipment for surgical implementation, atomic energy control instruments, airplane or spaceship instruments, the control or operation of dynamic, brake or safety systems designed for vehicular use, traffic signal instruments, all types of safety devices, and other applications intended to support or sustain life.

All Insecure Usage shall be made at customer's risk, and in the event that third parties lay claims to Nuvoton as a result of customer's Insecure Usage, customer shall indemnify the damages and liabilities thus incurred by Nuvoton.

Please note that all data and specifications are subject to change without notice.
