## 1 OVERVIEW

NuTiny-SDK-NUC029KGE is a specific development tool for NuMicro® NUC029KGE. With the NuTiny-SDK-NUC029KGE, user can develop and verify the application program easily.

The NuTiny-SDK-NUC029KGE includes two portions. One is NuTiny-EVB-NUC029KGE and the other is Nu-Link2-Me. NuTiny-EVB-NUC029KGE is the evaluation board and Nu-Link2-Me is its Debug Adaptor. Thus, user does not need other additional ICE or debug equipment.

The NUC029KGE can bridge the gap and replace the cost equivalent to traditional 8- and 16-bit microcontroller by 32-bit performance and rich functions. The NUC029KGE supports a wide range of applications from low-end, price sensitive designs to computing-intensive ones and provides advanced high-end features in economical products.

The NuMicro® NUC029xGE of NUC029 series microcontroller based on the Arm® Cortex®-M0 core operates at up to 72 MHz. With its crystal-less USB 2.0 FS interface, it is able to generate precise frequency required by USB protocol without the need of external crystal. It features adjustable VDDIO pins for specific I/O pins with a wide range of voltage from 1.8 V to 5.5 V for various operating voltages of external components, a unique high-speed PWM with clock frequency up to 144 MHz for precision control, and an integrated hardware divider to speed up the calculation for the control algorithms. Apart from that, the NUC029xGE also integrates SPROM (Security Protection ROM) which provides a secure code execution area to protect the intelligent property of developers. The NuMicro® NUC029xGE of NUC029 series is ideal for industrial control, motor control and metering applications.

The NuMicro® NUC029xGE of NUC029 series supports the wide voltage range from 2.5 V to 5.5 V and temperature ranging from -40°C to 105°C, up to 256 Kbytes of Flash memory, 20 Kbytes of SRAM, 4 Kbytes of ISP (In-System Programming) ROM as well as ICP (In-Circuit Programming) ROM and IAP (In-Application Programming) ROM in 48-, 64-, 128-pin packages. It also supports high immunity of 8KV ESD (HBM)/4KV EFT. It is also equipped with plenty of peripherals such as USB interface, Timers, Watchdog Timers, RTC, PDMA, EBI, UART, Smart Card Interface, SPI, I<sup>2</sup>S, I<sup>2</sup>C, GPIO, up to 12 channels of 16-bit PWM, up to 20 channels of 12-bit ADC, analog comparator, temperature sensor, low voltage reset, brown-out detector, 96-bit UID (Unique Identification), and 128-bit UCID (Unique Customer Identification).

Besides, the NUC029KGE is equipped with ISP (In-System Programming) and ICP (In-Circuit Programming) functions, which allow the user to update the program memory without removing the chip from the actual end product. The NUC029KGE also supports In-Application-Programming (IAP) function, user switches the code executing without the chip reset after the embedded flash updated.

## 2 NUTINY-SDK-NUC029KGE INTRODUCTION

The NuTiny-SDK-NUC029KGE uses the NUC029KGE as the target microcontroller. Figure 2-1 is NuTiny-SDK-NUC029KGE for the NUC029KGE, the left portion is called NuTiny-EVB-NUC029KGE and the right portion is Debug Adaptor called Nu-Link2-Me.

Nu-Link2-Me is a Debug Adaptor. The Nu-Link2-Me Debug Adaptor connects your PC's USB port to your target system (via Serial Wired Debug Port) and allows you to program and debug embedded programs on the target hardware. The Nu-Link2-Me also supports VCOM function, which gives users more flexibility when debugging. To use the Nu-Link2-Me Debug adaptor with IAR or Keil, please refer to "Nuvoton NuMicro® IAR ICE driver user manual" or Nuvoton NuMicro® Keil ICE driver user manual" in detail. These two documents will be stored in the local hard disk when the user installs each driver. To use Nu-Link2-Me VCOM function, please refer to Chapter 5.

The Nu-Link2-Me is a debugger and programmer that supports on-line programming and debugging through SWD interface. The on-board 16 Mbit SPI Flash allows it to off-line program the target microcontroller. Additionally, the Nu-Link2-Me provides virtual COM port (VCOM) function to print out messages on PC. Table 2-13 presents how to set the VCOM function by ICESW2.

ICESW2		
Pin	Function	Comment
1	TXD	<b>On:</b> Connect target chip PA.2 (UART0_TXD) to Nu-Link2-Me. <b>Off:</b> Disconnect target chip PA.2 (UART0_TXD) to Nu-Link2-Me.
2	RXD	<b>On:</b> Connect target chip PA.3 (UART0_RXD) to Nu-Link2-Me. <b>Off:</b> Disconnect target chip PA.3 (UART0_RXD) to Nu-Link2-Me.
<b>Note:</b> Pin 3 and 4 is unused.

## 5 STARTING TO USE NU-LINK2-ME VCOM FUNCTION

### 5.1 Downloading and Installing VCOM Driver

Please connect to Nuvoton NuMicro® website (<http://www.nuvoton.com/NuMicro>) to download the “NuMicro® ICP Programming Tool” file. After the ICP Programming Tool driver is downloaded, please unzip the file and execute the “ICP Programming Tool.exe”. Simply follow the installation and optional steps to install ICP Programming Tool and Nu-Link USB Driver, which included VCOM driver.

## 5.2 VCOM Mode Setting on NuTiny-SDK-NUC029KGE

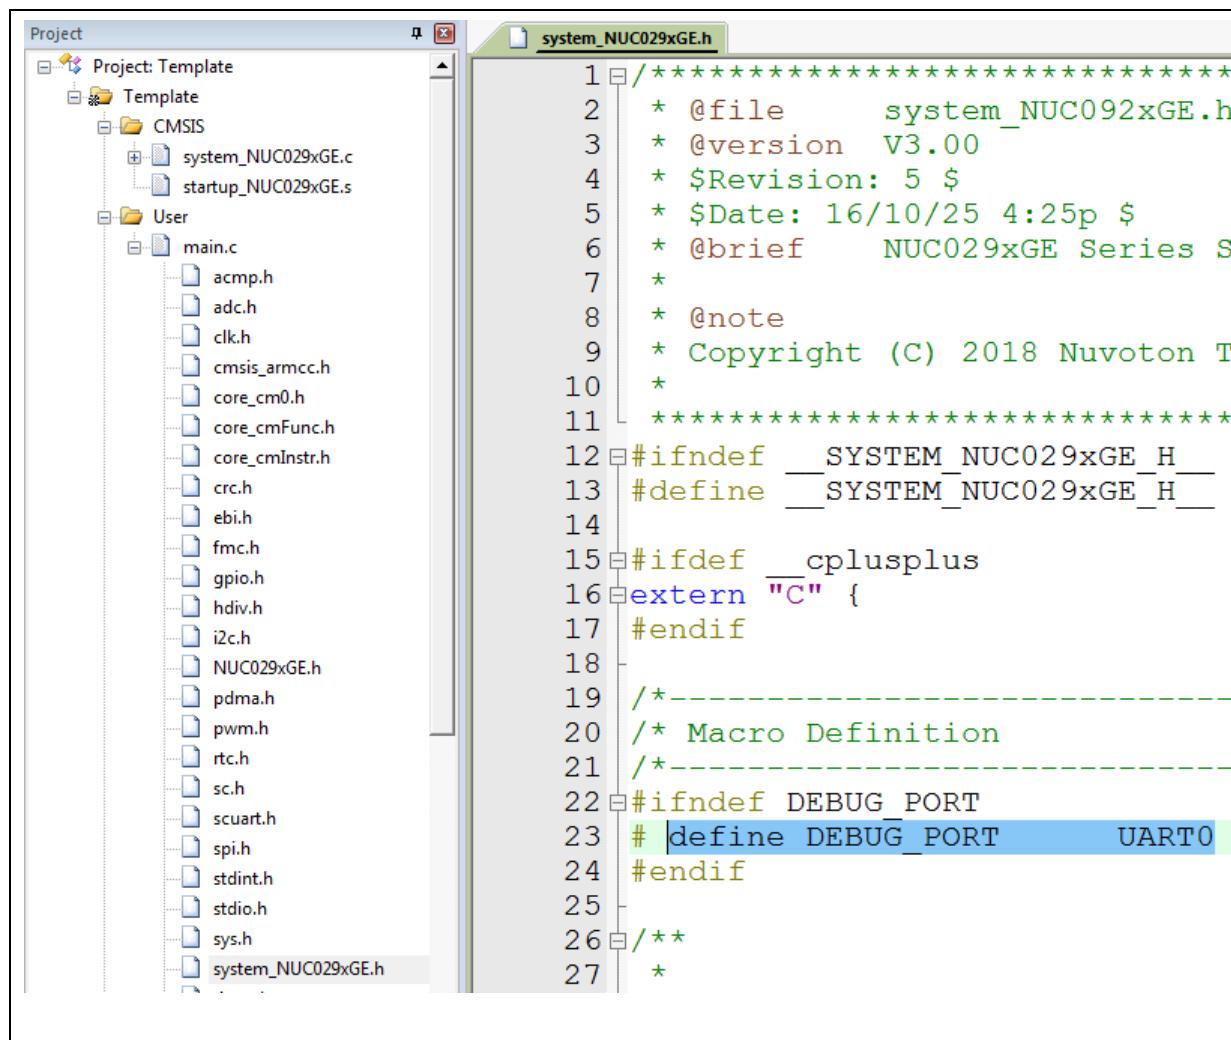

Before the NuTiny-SDK-NUC029KGE is connected to the PC, please enable VCOM function by switching on ICESW2. The NuTiny-EVB-NUC029KGE transmits through UART0 to VCOM to send out data. Switch ICESW2 off when using UART0 function without VCOM function.

## 5.3 Development Tool Setup

The example is demonstrated on the Keil µVision® IDE.

### 5.3.1 Check the Using UART on the Keil µVision® IDE

Please open the project and find system\_NUC029xGE.h to check the using UART in DEBUG\_PORT, which has to be the same as the using UART in the NuTiny-EVB-NUC029KGE.

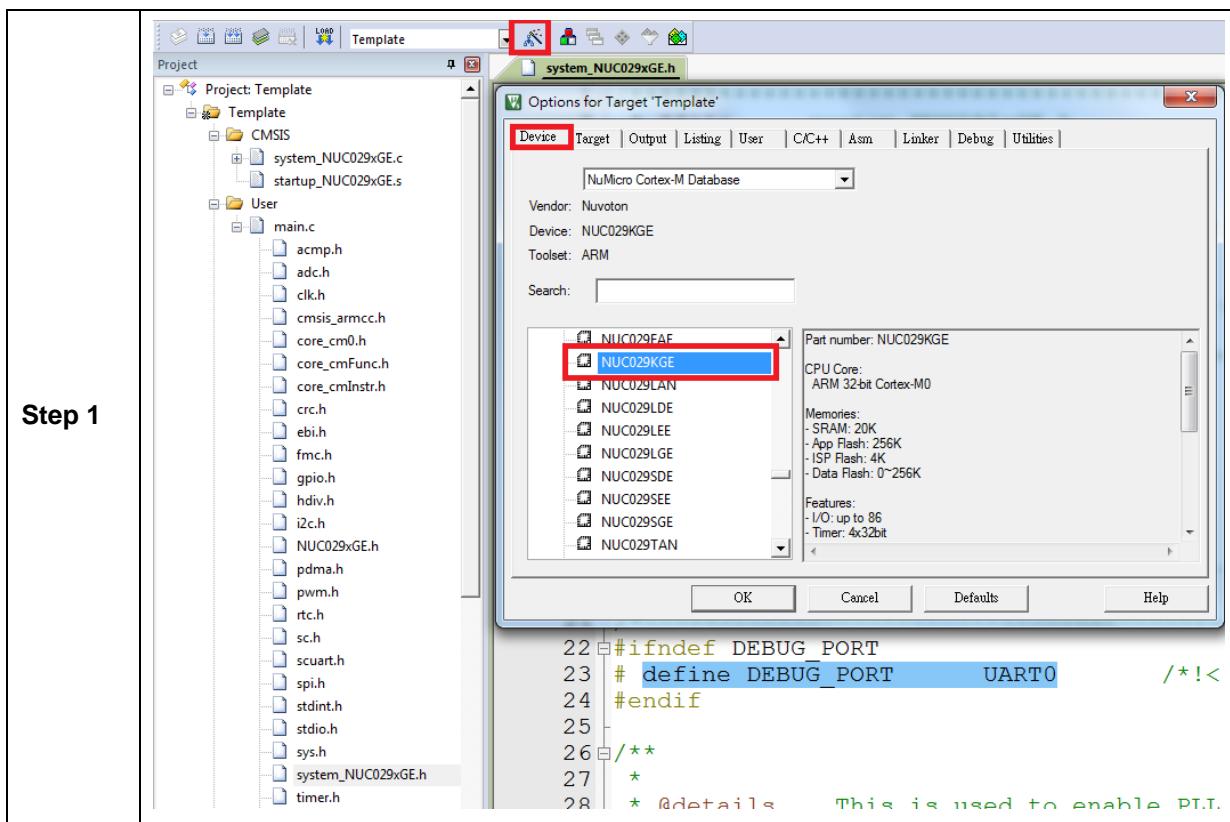

The screenshot shows the Keil µVision IDE interface. On the left is the Project Explorer window, which lists the project structure. It includes a 'Template' folder containing 'CMSIS' (with 'system\_NUC029xGE.c' and 'startup\_NUC029xGE.s') and 'User' (with 'main.c' and many header files like 'acmp.h', 'adc.h', etc.). The right side is the code editor window, showing the file 'system\_NUC029xGE.h'. The code is as follows:

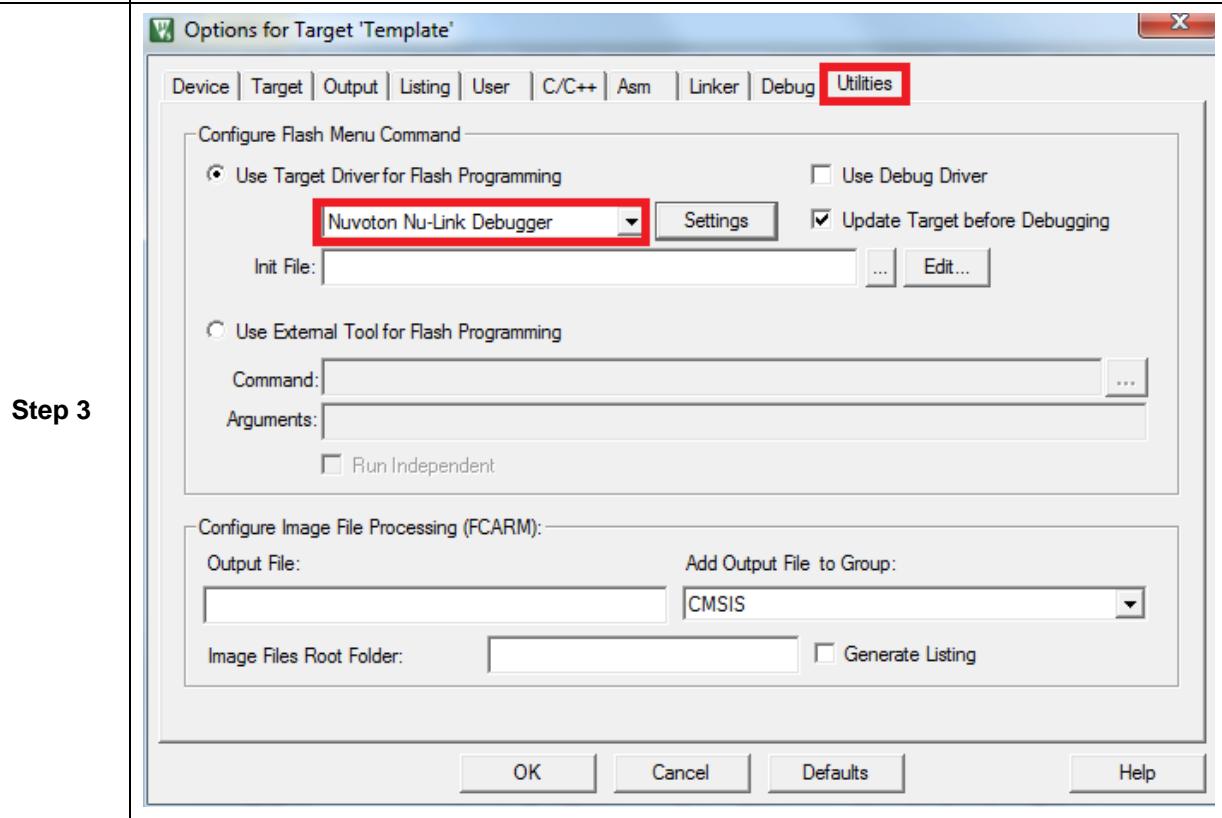

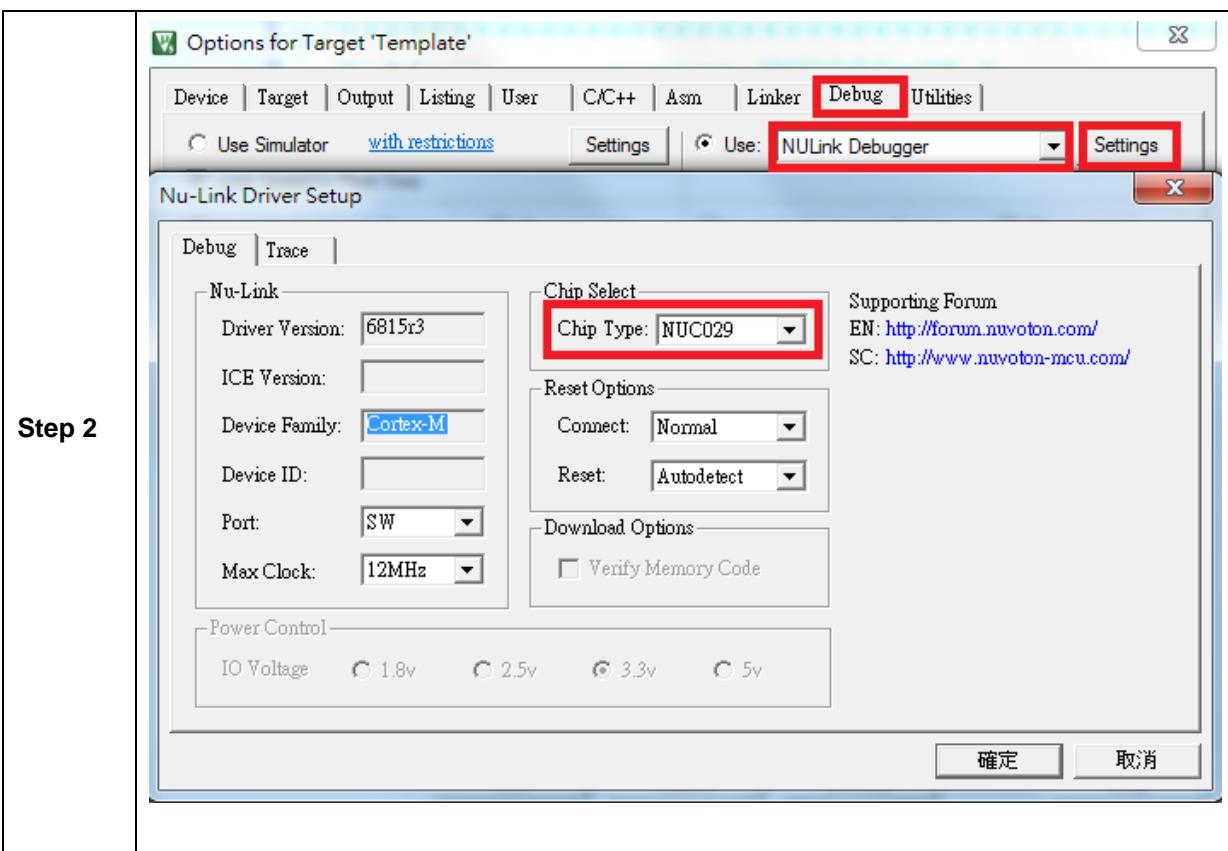

```
1  /*****
2   * @file      system_NUC092xGE.h
3   * @version   V3.00

### 5.3.2 Check the Target Device and Debug Setting

The target device has to be the same as the setting in Debug. Please click “Target Option” to open the Option windows, and find the setting in “Device”, “Debug”, and “Utilities” page. Please follow the steps below to check the setting.

### 5.3.3 Build and Download Code to NuTiny-SDK-NUC029KGE

Please build the project and download code to the NuTiny-SDK-NUC029KGE.

### 5.3.4 Open the Serial Port Terminal

User can use serial port terminal, PuTTY for example, to print out debug message.

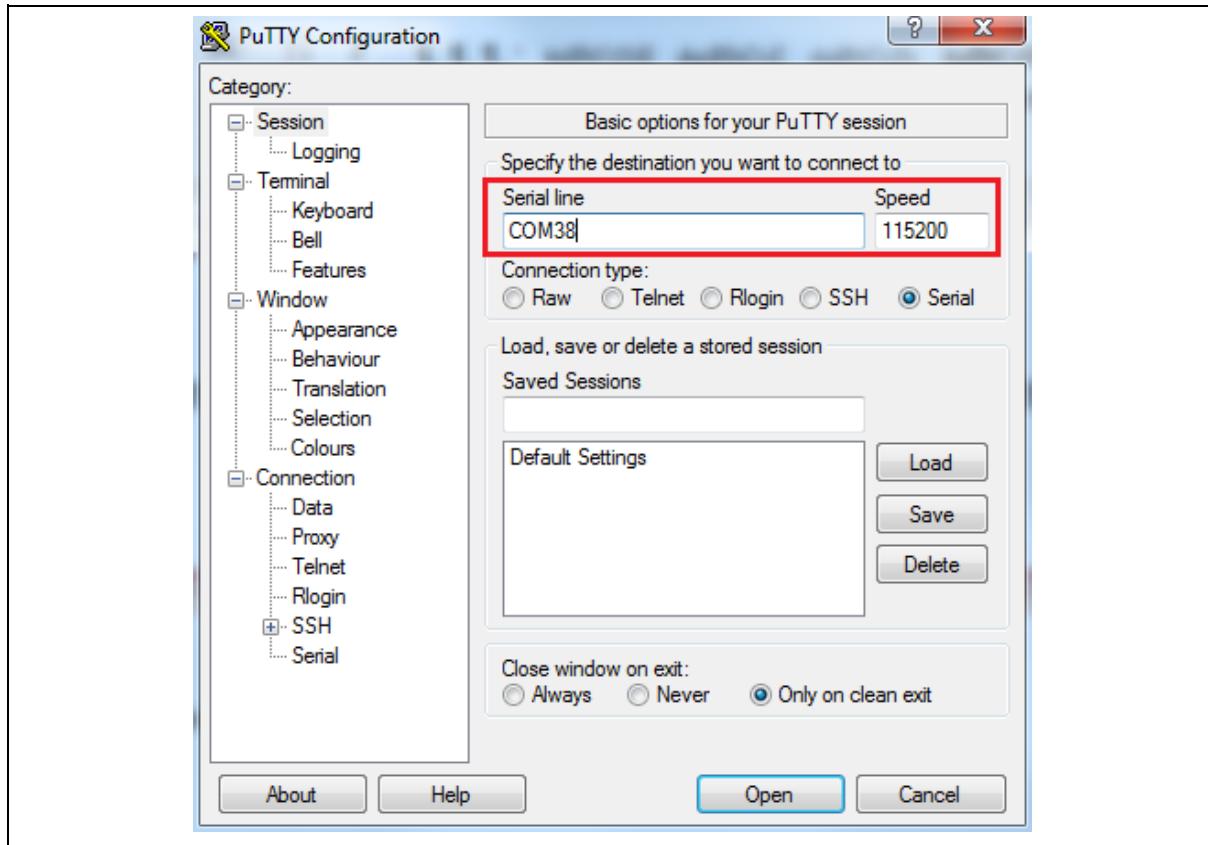

Figure 5-5 Set Baud Rate

### 5.3.5 Reset Chip

After pushing the reset button, the chip will reprogram application and print out debug message.

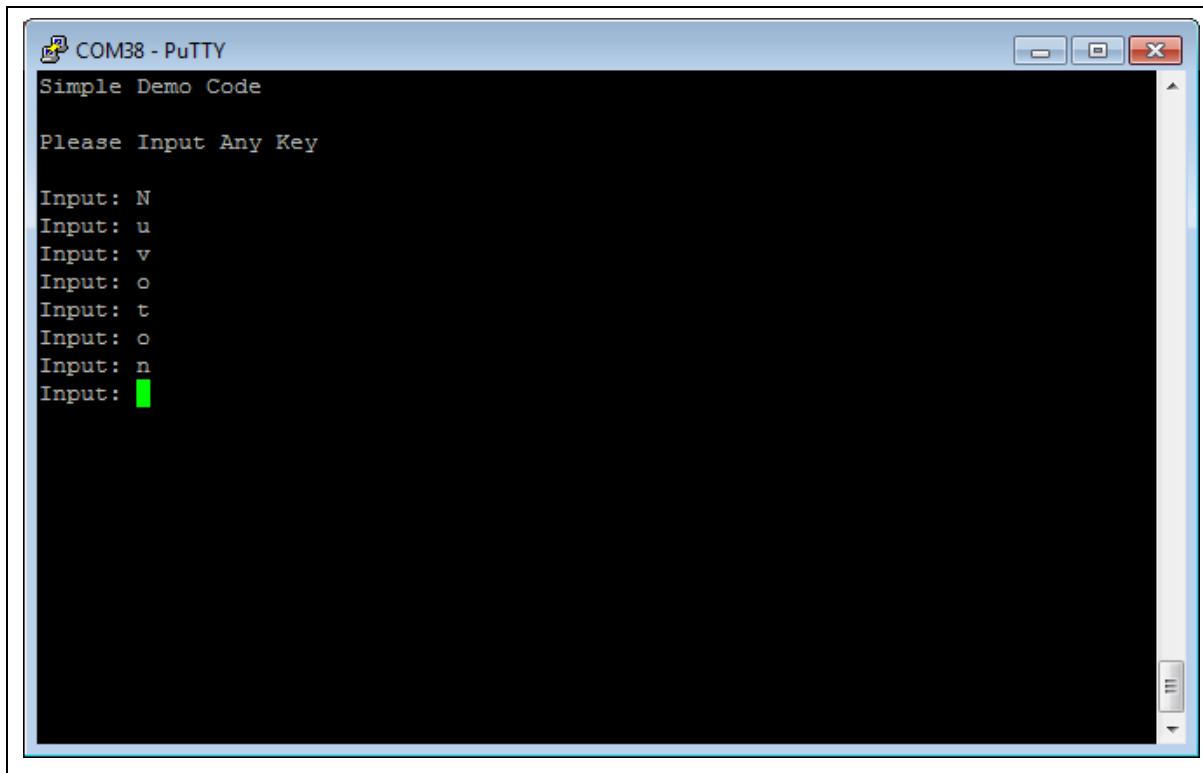

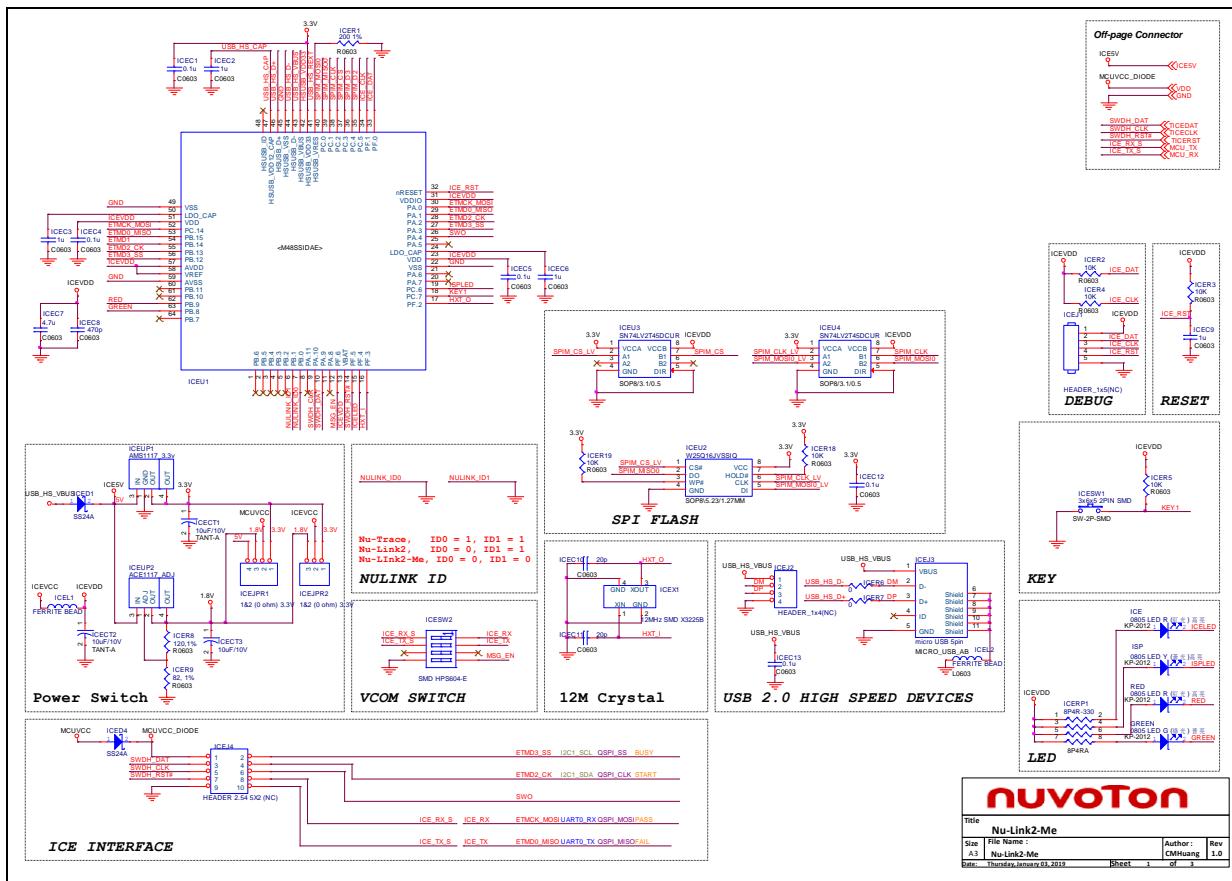

Figure 5-6 Serial Port Terminal Windows

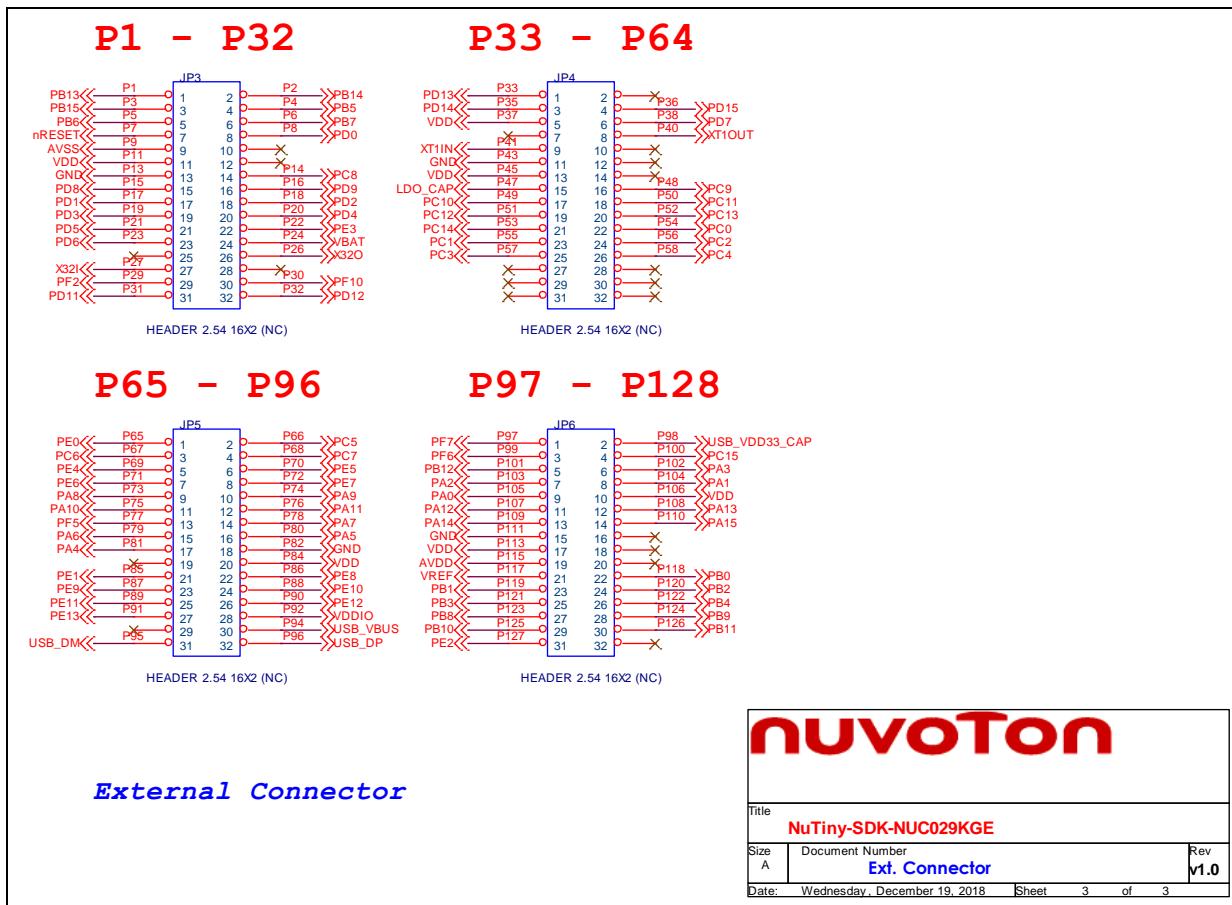

**Note:** Please switch ICESW2 on before the NuTiny-SDK-NUC029KGE is connected to the PC. When the NuTiny-SDK-NUC029KGE is connected to the PC with ICESW2 switch on, PC will detect VCOM as a USB device and the detection will only be processed once. VCOM will not function if ICESW2 switched on after the connection.
