1 OVERVIEW

The NuMaker-IoT-M467 is an evaluation board for Nuvoton NuMicro M467SJHAN, M467KJHAN, M467JJHAN, M467HJHAN microcontrollers. The NuMaker-IoT-M467 consists of two parts: an M467 target board and an on-board Nu-Link2-Me debugger and programmer. The NuMaker-IoT-M467 is designed for project evaluation, prototype development and validation with power consumption monitoring function.

The M467 target board contains a Wi-Fi module and a CAN FD transceiver for users to develop industrial IoT applications. Furthermore, the M467 target board is equipped with a thermal sensor and a 6-axis sensor for quick development.

The M467 target board is based on NuMicro M467HJHAN. For the development flexibility, the M467 target board provides the Arduino UNO compatible headers and the capability of adopting multiple power supplies. Furthermore, the Nuvoton-designed ammeter connector can measure the power consumption instantly, which is essential for the prototype evaluation.

In addition, there is an attached on-board debugger and programmer “Nu-Link2-Me”. The Nu-Link2-Me supports on-chip debugging, online and offline ICP programming via SWD interface. The Nu-Link2-Me supports virtual COM (VCOM) port for printing debug messages on PC. Besides, the programming status could be shown on the built-in LEDs. Lastly, the Nu-Link2-Me could be detached from the evaluation board and become a stand-alone mass production programmer.

Figure 1-1 NuMaker-IoT-M467 Evaluation Board
2 FEATURES

- NuMicro M467HJHAN used as main microcontroller with function compatible with:
  - M467SJHAN
  - M467KJHAN
  - M467JJHAN

- Arduino UNO compatible extension connectors

- Ammeter connector for measuring the microcontroller's power consumption

- Flexible board power supply:
  - External VDD power connector
  - Arduino UNO compatible extension connector Vin
  - USB FS connector on M467 target board
  - USB HS connector on M467 target board
  - ICE USB connector on Nu-Link2-Me

- On-board Nu-Link2-Me debugger and programmer:
  - Debug through SWD interface
  - Online/offline programming
  - Virtual COM port function

- On-board components:
  - 32 Mbits SPI Flash
  - Thermal sensor (Nuvoton NCT7717U)
  - User defined LEDs and buttons
  - 10/100M Ethernet PHY
  - USB HS OTG and USB FS OTG
  - Micro SD Card slot
  - CAN FD transceiver
  - Wi-Fi module (ESP-12F)
  - mikroBUS™ interface
  - 6-Axis sensor (MPU6500)
3 INTRODUCTION TO NUMICRO IOT PLATFORM

The NuMicro IoT platform provides the cloud services support, tools, and developer ecosystem to make the creation and deployment of commercial, standards-based IoT solutions possible. As an IoT resource, the NuMicro IoT platform contains a core, and security, key IoT networking and communication capability.

The NuMicro IoT platform allows IoT devices to collaborate and communicate with each other on the basis of transparency. With abstractions API design, the NuMicro IoT platform allows users to focus on application development, not underlying system complexity.

For more information on NuMicro IoT platform, please visit NuMicro IoT platform webpage:
https://www.nuvoton.com/products/iot-solution/iot-platform/
4 HARDWARE CONFIGURATION

4.1 Front View

Figure 4-1 Front View of NuMaker-IoT-M467

Figure 4-1 shows the main components and connectors from the front side of NuMaker-IoT-M467. The following lists components and connectors from the front view:

- Target chip: M467HJHAN (U1)
- USB FS Connector (J2)
- USB HS Connector (J3)
- Arduino UNO Compatible Extension Connectors (NU1, NU2, NU3, NU4)
- External VDD Power Connector (JP1)
- External VSS Power Connector (JP2)
- External VDDIO Connector (VDDIO)
- External VBAT Connector (VBAT)
- External VREF Connector (VREF)
- Ammeter Connector (AMMETER)
- Reset Button (RESET)
- Power LED (LED_PWR), PH4 Red LED (LED_R), PH5 Yellow LED (LED_Y), and PH6 Green LED (LED_G)
- Nu-Link2-Me
  - VCOM Switch
  - ICE Chip: M48SSIDAE (ICEU2)
  - ICE USB Connector (ICEJ3)
  - ICE Status LED (ICES0, ICES1, ICES2, ICES3)
  - Off-line Program Button (ICESW1)
4.2 Rear View

Figure 4-2 shows the main components and connectors from the rear side of NuMaker-IoT-M467. The following lists components and connectors from the rear view:

- Micro SD Card Connector (U5) and SD Card Power LED (SD_PWR)
- **Thermal Sensor (U10, Nuvoton NCT7717U)**
- SPI Flash (U11)
- Nu-Link2-Me
  - MCUVCC Power Switch (ICEJPR1)
  - CEVCC Power Switch (ICEJR2)

4.4 mikroBUS™ Interface

NuMaker-IoT-M467 features a MikroElektronika mikroBUS™ socket which has the smallest number of pins but has maximum expandability. The MikroElektronika mikroBUS™ consists of communications pins including SPI, UART and I2C, one PWM pin, one interrupt pin, one analog input pin, one reset pin and one chip select pin, and has 3.3V and 5V power pin. Table 4-3 shows mikroBUS™ mapping with M467HJHAN.

For more information about MikroElektronika mikroBUS™ standard, please visit the MikroElektronika mikroBUS™ website: [https://www.mikroe.com/mikrobus](https://www.mikroe.com/mikrobus).

Table 4-3 mikroBUS™ Mapping with M467HJHAN
4.5 Power Supply Configuration

The NuMaker-IoT-M467 is able to adopt multiple power supplies. External power sources include NU1 Vin (7 V to 12 V), VDD (depending on the target chip operating voltage), and PC through USB connector. By using switches and voltage regulator, multiple power domains can be created on the NuMaker-IoT-M467.

### 4.5.7 Power Supply Models

#### 4.5.7.1 External Power Supply through Nu-Link2-Me to Target Chip

The external power supply source on Nu-Link2-Me is shown in Figure 4-4.
To use ICEJ3 as external power supply source with Nu-Link2-Me, please follow the steps below:

1. Solder the resistor on ICEJPR1 (MCUVCC) depending on the target chip operating voltage.
2. Solder the resistor on ICEJPR2 (ICEVCC) depending on the ICE chip operating voltage.
3. Connect the external power supply to ICEJ3.

Table 4-10 presents all power models when supplying external power through Nu-Link2-Me. The Nu-Link2-Me external power sources are highlighted in yellow.

<table>
<thead>
<tr>

2. 0 Ω should be soldered between ICEJPR2’s ICEVCC and 1.8 V / 3.3 V.
3. -: Unused.

Table 4-10 Supply External Power through Nu-Link2-Me

### 4.5.7.2 External Power Supply through M467 Target Board to Target Chip

The external power supply sources on M467 target board are shown in Figure 4-5.

![External Power Supply Sources on M467 Target Board](image)

**To use Vin or J2 or J3 as external power supply source, please follow the steps below:**

1. Remove the resistor on ICEJPR1 (MCUVCC).
2. Solder the resistor on ICEJPR2 (ICEVCC) depending on the ICE chip operating voltage.
3. Connect the external power supply to Vin or J2 or J3.
**To use JP1 as external power supply source, please follow the steps below:**

1. Remove the resistor on ICEJPR1 (MCUVCC).
2. Solder the resistor on ICEJPR2 (ICEVCC) depending on the ICE chip operating voltage.
3. Connect ICEJ3 to PC.
4. Connect the external power supply to JP1.

**To use Vin or J2 or J3 as external power supply source with Nu-Link2-Me detached from NuMaker-IoT-M467, please follow the steps below:**

1. Detach the Nu-Link2-Me from NuMaker-IoT-M467.
2. Connect the external power supply to Vin or J2 or J3.

**To use JP1 as external power supply source with Nu-Link2-Me detached from NuMaker-IoT-M467, please follow the steps below:**

1. Detach the Nu-Link2-Me from NuMaker-IoT-M467.
2. Connect the external power supply to JP1.

---

**Figure 4-6 Detach the Nu-Link2-Me from NuMaker-IoT-M467**
Table 4-11 presents all power models when supplies external power through M467 target board. The M467 target board external power sources are highlighted in yellow.

<table>
<thead>
<tr>

<td>-</td>
</tr>
</tbody>
</table>

**Note:**
1. The Vin input voltage will be converted by voltage regulator UP2 to 5 V. Supplying external power to Vin or J2 or J3 can provide 5 V to NU1 pin5 (5V) and 3.3 V to NU1 pin4 (3VCC).
2. JP1 external power input only provides voltage to target chip.
3. 0 Ω should be removed from ICEJPR1’s MCUVCC and 1.8 V / 3.3 V / 5 V.
4. 0 Ω should be soldered between ICEJPR2’s ICEVCC and 1.8 V / 3.3 V.
5. The ICE chip voltage should be close to the target chip voltage.
6. - : Unused

4.10 Nu-Link2-Me

The Nu-Link2-Me is an attached on-board debugger and programmer. The Nu-Link2-Me supports on-chip debugging, online and offline ICP programming through SWD interface. The Nu-Link2-Me also supports virtual COM port (VCOM) for printing debug messages on PC. Besides, the programming status could be shown on the built-in LEDs. Lastly, the Nu-Link2-Me could be detached from the evaluation board and become a stand-alone mass production programmer. For more information about Nu-Link2-Me, please refer to Nu-Link2-Pro Debugger and Programmer User Manual.

Table 4-17 Operation Status LED Patterns
5  QUICK START

5.1  Toolchains Supporting
Install the preferred toolchain. Please make sure at least one of the toolchains has been installed.

- KEIL MDK Nuvoton edition
- IAR EWARM
- NuEclipse GCC (for Windows)
- NuEclipse GCC (for Linux)

5.2  Nuvoton Nu-Link Driver Installation
Download and install the latest Nuvoton Nu-Link Driver.

- Download and install Nu-Link Keil Driver when using Keil MDK.
- Download and install Nu-Link IAR Driver when using IAR EWARM.
- Skip this step when using NuEclipse.

Please install the Nu-Link USB Driver as well at the end of the installation. The installation is presented in Figure 5-1 and Figure 5-2.

![Figure 5-1 Nu-Link USB Driver Installation Setup](image-url)
Figure 5-2 Nu-Link USB Driver Installation
5.3 BSP Firmware Download

Download and unzip the Board Support Package (BSP).

5.4 Hardware Setup

1. Open the virtual COM (VCOM) function by changing Nu-Link2-Me VCOM Switch No. 1 and 2 to ON.

![Figure 5-3 Open VCOM Function](image)

2. Connect the ICE USB connector shown in Figure 5-4 to the PC USB port through a USB cable.

![Figure 5-4 ICE USB Connector](image)
3. Find the “Nuvoton Virtual COM Port” on the Device Manger as Figure 5-5.

![Figure 5-5 Device Manger](image)

4. Open a serial port terminal, PuTTY for example, to print out debug message. Set the speed to 115200. Figure 5-6 presents the PuTTY session setting.

![Figure 5-6 PuTTY Session Setting](image)
5.5 Find the Example Project

Use the “Template” project as an example. The project can be found under the BSP folder as shown in Figure 5-7.

```
 M460_Series_BSP_CMSIS_V3.XX.XXX
    SampleCode
    Template
        GCC
        Keil
        IAR
```

Figure 5-7 Template Project Folder Path

5.6 Execute the Project under Toolchains

Open and execute the project under the toolchain. The section 5.6.1, 5.6.2, and 5.6.3 describe the steps of executing project in Keil MDK, IAR EWARM and NuEclipse, respectively.

5.6.1 Keil MDK

This section provides steps to beginners on how to run a project by using Keil MDK.

1. Double-click the “Template.uvproj” to open the project.

   ![Warning Message of “Device not found”]

   Figure 5-8 Warning Message of “Device not found”

   **Note:** If Figure 5-8 warning message jumps out, please migrate to version 5 format as shown in Figure 5-9. The “.uvproj” filename extension will change to “.uvprojx”.

   ![Figure 5-9 migrated version]

   **Figure 5-9 Migrated Version**
2. Make sure the debugger is “Nuvoton Nu-Link Debugger” as shown in Figure 5-10 and Figure 5-11.

Note: If the dropdown menu in Figure 5-10 does not contain “Nuvoton Nu-Link Debugger” item, please rework section 5.2.
3. Rebuild all target files. After successfully compiling the project, download code to the Flash memory. Click “Start/Stop Debug Section” button to enter debug mode.
4. Figure 5-13 shows the debug mode under Keil MDK. Click “Run” and the debug message will be printed out as shown in Figure 5-14. User can debug the project under debug mode by checking source code, assembly language, peripherals’ registers, and setting breakpoint, step run, value monitor, etc.

![Keil MDK Debug Mode](image1)

Figure 5-13 Keil MDK Debug Mode

![Debug Message on Serial Port Terminal Windows](image2)

Figure 5-14 Debug Message on Serial Port Terminal Windows
5.6.2 IAR EWARM

This section provides steps to beginners on how to run a project by using IAR EWARM.

1. Double click the “Template.eww” to open the project.
2. Make sure the toolbar contains “Nu-Link” item as shown in Figure 5-15.

Note: If the toolbar does not contain “Nu-Link” item, please rework section 5.2.

3. Make a target file as presented in Figure 5-16. After successfully compiling the project, download code to the Flash memory and enter debug mode.

Figure 5-15 IAR EWARM Window

Figure 5-16 Compile and Download the Project
4. Figure 5-17 shows the debug mode under IAR EWARN. Click “Go” and the debug message will be printed out as shown in Figure 5-18. User can debug the project under debug mode by checking source code, assembly language, peripherals’ registers, and setting breakpoint, step run, value monitor, etc.

![Figure 5-17 IAR EWARM Debug Mode](image)

![Figure 5-18 Debug Message on Serial Port Terminal Windows](image)
5.6.3 NuEclipse

This section provides steps to beginners on how to run a project by using NuEclipse. Please make sure the filenames and project folder path contain neither invalid character nor space.

1. Double-click “NuEclipse.exe” to open the toolchain.
2. Import the “Template” project by following the steps presented in Figure 5-19 and Figure 5-20.

![Figure 5-19 Import the Project in NuEclipse](image)

![Figure 5-20 Import Projects Windows](image)
3. Click the “Template” project and find the project properties as shown in Figure 5-21. Make sure the settings are the same as settings in Figure 5-22.

Figure 5-21 Open Project Properties Window

Figure 5-22 Project Properties Settings
4. Click the “Template” project and build the project.

![Figure 5-23 Build Project](image)

5. After the project is built, click the “Template” project and set the “Debug Configuration” as shown in Figure 5-24. Follow the settings presented in Figure 5-25, Figure 5-26 and Figure 5-27 to enter debug mode.

![Figure 5-24 Open Debug Configuration](image)
**Note 1:** Double-click the “GDB Nuvoton Nu-Link Debugging” to create the sub item.

**Note 2:** After the project is built, the “*.elf” file will be shown in “C/C++ Application” frame.

Figure 5-25 Main Tab Configuration

Figure 5-26 Debugger Tab Configuration
**Note:** User must follow those settings highlighted in green, and configure other settings depending on the needs.

**Figure 5-27 Startup Tab Configuration**
6. Figure 5-28 shows the debug mode under NuEclipse. Click “Resume” and the debug message will be printed out as shown in Figure 5-29. User can debug the project under debug mode by checking source code, assembly language, peripherals’ registers, and setting breakpoint, step run, value monitor, etc. For more information about how to use NuEclipse, please refer to the NuEclipse User Manual.

Important Notice

Nuvoton Products are neither intended nor warranted for usage in systems or equipment, any malfunction or failure of which may cause loss of human life, bodily injury or severe property damage. Such applications are deemed, “Insecure Usage”.

Insecure usage includes, but is not limited to: equipment for surgical implementation, atomic energy control instruments, airplane or spaceship instruments, the control or operation of dynamic, brake or safety systems designed for vehicular use, traffic signal instruments, all types of safety devices, and other applications intended to support or sustain life.

All Insecure Usage shall be made at customer’s risk, and in the event that third parties lay claims to Nuvoton as a result of customer’s Insecure Usage, customer shall indemnify the damages and liabilities thus incurred by Nuvoton.
